Web Solutions

Overnight offers 3 solutions to help our retailers capture more online business. Click link below or on the left panel to start.

Solution 1 - Custom Download & Preset Category Downloads

This option is for those customers who already have an established website and would like to download images and breakdowns for their existing site. Our customers have the ability to grab preset categories instantly or customize your download by choosing any category or sub categories that may suit your specific needs. This option requires some technical support on your end to upload all of the info and image to your site. This option provides a self-contained package zip file that consists of an excel data spreadsheet, as well as all images of your selected category. You can unzip all files to your computer; the excel file can be saved as universal "csv" file for further integration with whatever technology the customer is using. Downloaded products will be saved under "My Account" for archiving purposes.

Solution 2 - Create an I-Frame Solution

click Create an i-Frame link

For customers with technical staff or outside internet contracting services, this option creates an i-Frame link to our products. Products will appear as a "Frame" within our customer's existing web site. Basically, customers insert a link such as "Signature Collection" on their website, when clicked, an i-frame will link our products to customer's website giving the consumer the ability to view more product while staying on our customers website. Dynamic pricing is available for all items with this solution. Consumers can change metal, color, diamond quality or size and have it price out instantly at current metal markets.

Solution 3 - Create a Website

We will create, host, and support an independent website under your store name, e.g. JohnJewelry.overnight.com. This option provides an effortless, instant internet solution for customers who want to sell overnight products with dynamic pricing capability such as different diamond quality, different metal etc. Your store brand will be the identity of the website. You will be able to upload your logo, contact info and "about us" and transform our site into your retail site. Thousands of new products will be added to the website on a regular basis at no cost to customers.

I-Frame Links

I-Frame Components

Overnight has created 10 i-frame solutions that our retailers can use to easily and quickly "plug in" to their existing websites under any desired categories. For example, if a retailer installs the Overnight Engagement ring i-frame and sets the link to appear under their web-site's bridal category under "our signature collection", then any consumer that clicked on "Our signature collection" would instantly access all of Overnight engagement ring styles - without ever leaving the retailer's site!

All subcategories within engagement rings would appear as options and when specific items were selected, the consumer would be able to view accurate, daily triple-key pricing, in multiple metals and diamonds qualities. Once a consumer chooses an item in a desired metal and diamond quality - the retail jeweler would have full control of when and if to place that order with Overnight.

Please follow this 3 step process to install any or all of these I-Frame solutions into your website:

- Step 1) Create an i-Frame on an empty page within your existing website
- Step 2) Copy the code above into the frame
- Step 3) Set a navigation link on your website into the iFrame page

7. Once our iFrame link is set to appear under your websites, then any customer that click the link would instantly access all of Overnight styles – without ever leaving your site. Please go to our sample site to see how it works.
<http://www.overnightmountings.com/Jewelry-Store>

8. All operating systems and web applications are different and if you are not familiar with adding links or i-Frames to your website, this step will require some technical support on your end.
